Immokalee Regional Airport

Collier County Airport Authority - Immokalee, Florida

Hole Montes designed, permitted, and provided construction administration for the development of the general aviation apron and taxiway at the Immokalee Regional Airport for the Collier County Airport Authority. The taxiway (1,440' X 35') was designed to support 70,000 lb. corporate aircraft. The 50,000 square foot aircraft apron was constructed utilizing both P-401 bituminous and P-501 port-land cement concrete pavements. The FDOT found these projects to be of “high quality” which resulted in the airport receiving the FDOT 1997 General Aviation Airport of the Year award.

Hole Montes, Inc. completed the design of the 10 Unit T-Hangars, Bulk Storage Hangar, and the Cargo Processing, at the Immokalee Regional Airport.

In 1999 Hole Montes completed the lighting and signage of taxiway A and C along with replacement of the lighting on Runway 18-36. This project included a new airfield electrical vault.
